# DISPOSABLE FACE MASKS

Blue • 175mm X 95mm • FFP1 NR • Standard BS EN 149: 2001+A1:2009

## NF EN 14683 for Surgical Masks

A surgical mask is a medical equipment. Produced as per standard NF EN 14683, it is designed to prevent the wearer from spreading droplets in the vicinity. It also protects the wearer from droplets produced by a person directly in front of them. However, depending on the circumstances, it does not protect from inhaling the very small particles suspended in the air that potentially carry the virus.

**There are three different types of surgical masks\*:**

- **Type I: bacteria filtering effectiveness > 95%.**
- **Type II: bacteria filtering effectiveness > 98%.**
- **Type IIR: bacteria filtering effectiveness > 98% and splash-resistant.**

## NF EN 149 for FFP masks

An FFP mask ("Filtering Face piece Particles") is an individual respirator protection mask. Developed as per standard NF EN 149, it is designed to protect the wearer against the inhalation of both droplets and particles suspended in the air. Wearing this type of mask is more restrictive than a surgical mask (heat-related discomfort, breathing resistance), but it protects from inhaling infectious pathogens. Available in shell, 2-ply, 3-ply and duckbill shapes, with or without an exhaling valve, with optional facial seals.

**There are three categories, according to their effectiveness:**

- **FFP1 masks which filter at least 80% of aerosols (inward leakage < 22%);**
- **FFP2 masks which filter at least 94% of aerosols (inward leakage < 8%);**
- **FFP3 masks which filter at least 99% of aerosols (inward leakage < 2%)**
